COBALT M42 BI-METAL HSS BANDSAW BLADES

Bi-Metal blades combine the advantages of a high speed steel cutting edge and a highly fatigue resistant steel in the body of the blade. This gives a longer blade life and faster and more uniform cutting rates.

The M42 Cobalt high speed steel offers greater hardness and heat-resistance, allowing higher cutting rates in tough and difficult materials.

Available with either constant or variable pitch - same prices apply.

Quality Bandsaw and Bandknife

bandsaw product summary

Wood, Plastic and Non-ferrous Metal

Flexback

High performance hard tooth, flexible back carbon steel bandsaw for cutting most materials including wood, plastic and non-ferrous metals.

Product Code: F1

Furnisaw

A specialist thicker gauge blade for furniture or cable reel manufacture and cutting contours.

Product Code: F2

Extra Set

A specialist blade with a heavy set for furniture, cable reel manufacture and contour cutting.

Product Code: F3

RIPPER™

High performance hard tooth blade for timber ripping.

Product Code: F4

Hobby/Thin Gauge

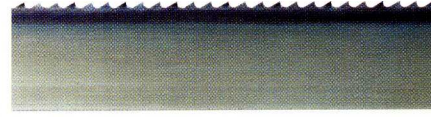

Extensive range of high performance thinner gauge flexback for smaller machines and DIY use.

Product Code: F5

Pallet Recycler

Specialist blade for pallet dismantling and recycling.

Product Code: F6

File-Resharpenable

Traditional file-resharpenable wood cutting bandsaw.

Product Code: S1

Food

Meat & Fish

Hard tooth, bright steel bandsaw for cutting food.

Product Code: F10

Bandknife

Knife edge blade for cutting soft foods and boneless meats. See *bandknife blades brochure*.

Product Code: K1-K13

Metals

Bimetal Matrix (M31/M2)

For general purpose metal cutting, interrupted cutting, fabrication work and cutting sections prone to vibration.

Product Code: M3

Flexback/Hardback

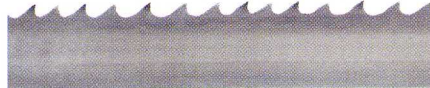

Hard tooth flexible back or hardback carbon bandsaw for cutting non-ferrous metals.

Product Code: F1/H1

Bimetal M42

For production metal cutting, solid sections and harder to cut exotic materials.

Product Code: M4

Friction

For high speed friction sawing of ferrous and hard to cut materials.

Product Code: F20

Foam, Textiles, Flexible/Soft Materials

Bandknife

Wide range of types and edges for foams, textiles and soft materials. See *bandknife blades brochure*.

Product Code: K1-K13

File-Resharpenable

For some specialist insulation and foam cutting applications. See *bandknife blades brochure*.

Product Code: S1-S2

Flexback

For some specialist insulation and foam cutting applications. See *bandknife blades brochure*.

Product Code: F1

Exotic Applications

Customised Blades

Wide range of blades, customised to specific applications to obtain outstanding cutting performance. Contact us for further information.

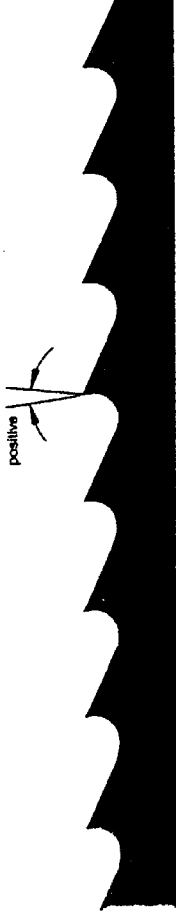

Product Code: X1

Tooth shapes

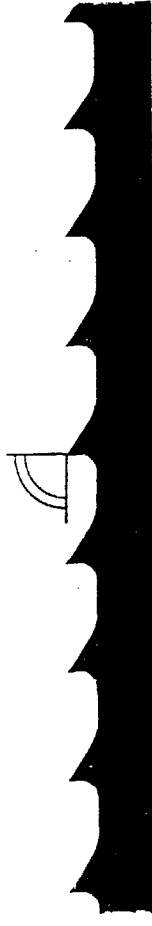

By using the term tooth shapes we refer to the form of the tooth and the gullet. The selection of the correct tooth shape will depend on the material to be cut (see chart on pages 18 and 19).

CONVENTIONAL TOOTH (S) rake angle 0°
Universal application. Used for cutting of cast iron, cast steel and rolled material (tooth pitches from 3 - 32 tpi).

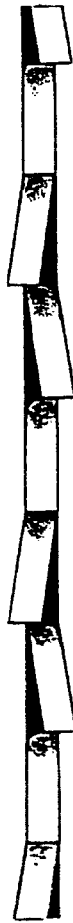

HOOK TOOTH (K) positive rake angle
Superior performance when cutting low carbon steel and non-ferrous metals. Used mainly for cutting large dimensions (tooth pitches from 0.75 to 6 tpi).

SKIP TOOTH (L) rake angle 0°
Mainly used for rigid materials of larger dimensions, i. e. cast iron, cast aluminium, brass alloy, and rigid plastics (tooth pitches 2, 3 and 4 tpi).

Tooth set

With tooth set we mean the side clearance of the blade created by the alternate setting (bending) of the teeth.

RAKER SET (SL S)
For universal application when cutting material from 3 mm thickness. Used mainly for steel, castings and hard non-ferrous metals.

WAVY SET (WS)
For smaller dimensions, thin wall tubes and shapes.

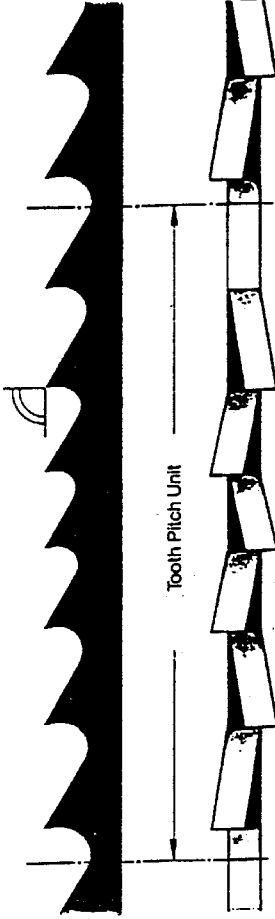

GROUP SET (GS)
Is used by smaller tooth pitches on blades for horizontal bandsaw machines. Recommended for cutting exceptionally small dimensions.

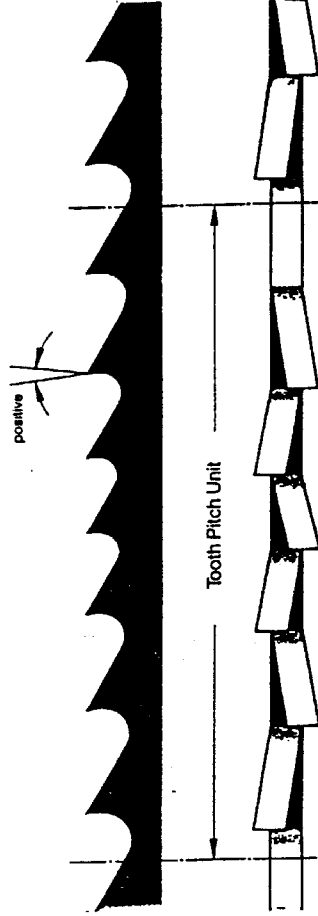

EVERY TOOTH SET (ETS)
For cutting soft materials such as non ferrous metals, plastics and wood.

Variable tooth pitch

A variable tooth distance and consequently the difference of gullet size will prevent vibrations and material chatter. The elimination of vibration increases tool life and produces a better cut surface. With variable tooth pitches a larger range of material dimensions can be cut with the same blade.

Variable Tooth Pitch with 0° rake angle
For the cutting of individual tubes and shapes as well as the bending of smaller dimensions (tooth pitches of 3-4 tpi to 10-14 tpi).

Variable Tooth Pitch with positive rake angle
This pitch will provide vibration free sawing of shapes and bundles of large dimensions. Can also be used for the cutting of solid materials (tooth pitches of 1-2 tpi to 4-8 tpi).

TERMS & CONDITIONS

VAT

All prices shown exclude VAT.

PRICES

All advertised prices may be changed without notification. We apply prices applicable on date of order.

The title of goods shall not pass to you until payment has been made of the full contract price and in case of non-payment we shall be entitled to re-posses or trace the goods or the proceeds of sale in your hands or in the hands of any liquidator or receiver.

All goods remain our property until paid for in full, (if paid by cheque or credit transfer, until such time as these are honoured.)

Order cancellations require our written approval. Expenses for materials and labour already incurred at the time of cancellation shall in all cases be paid to us.

Goods may only be returned if agreed by us and quoting our official returns note number. We reserve the right to reject any goods returned without our consent. Custom manufactured tools and tools under private label are, of course, not subject to returns as a matter of principle.

Any purchase terms from a buyer, contrary to the aforementioned conditions shall not be legally binding upon us, even if they constitute the basis for that order.

WARRANTY

We guarantee our tools to be free of all defects in materials and workmanship. In the event of claims, the tools must be forwarded, freight pre-paid, to our factory. The claim shall apply only to shipment of replacement parts free of charge. We do not accept liability for claims of any other kind. We shall not be liable for damages caused by the improper use of or handling of our tools.

PAYMENT

For holders of a credit account with us, our standard terms are net monthly a/c, i.e. payment must be made by the end of the month following that of the invoice date. We may withhold supplies and services from customers who exceed our credit terms.

If you do not hold a credit account with us, payment may be by cheque, cash or valid credit card or by pro-former invoice.
